

# Wheat

**Fall period in non-frost conditions:  
the most effective strategy  
for a correct fertilization**

**Land Plus** is an NPK (10.8.15) mineral compound fertilizer with an high amount of nitrogen in different forms (nitric, ammoniacal, ureic) and humic acids. The synergy with sulphur (28%) **improves the protein content** in several crops. Its balanced formulation and the presence of calcium, magnesium, sulphur and microelements ensure a **complete nutrition** to the plant. **Land Plus** is indicated for pre-sowing applications on cereal crops, oil crops and fruit trees.

**CereaSlow 33** is a nitrogen-based fertilizer obtained by blending with ureic nitrogen stabilised with NBPT. This is a molecule that inhibits the activity of urease enzyme in the soil, **reducing losses by volatilization** up to 30%. The high sulphur content (30%) **favours the protein synthesis** processes in the plant. It is ideal for the fertilization of cereal crops.

**Leaf N-Fast** is a liquid nitrogen fertilizer that **increases productivity and quality**, stimulates photosynthetic activity, vegetative development and the rapid transformation of nitrogen into enzymes and proteins.

Made  
in Italy

**Grow well to eat better**

# Application

## PRE-SOWING

**Mode: Dispersion or integration**

**Land Plus - 230 kg/ha**

or

**Land 30 - 230 kg/ha**

In case of a proven lack of phosphorus, the application of **Universal Up** is also suggested, at a dosage of **100-200 Kg/ha**

---

## BEFORE TILLERING (Growth stage I)

**Mode: Top dressing**

**CereaSlow33 - 320 kg/ha**

---

## TILLERING (Growth stage II)

**Mode: Foliar**

**Leaf N-Fast - 10 l/ha**
