

Maize

Increasing yield and quality of the crop

Universal Up is an NP (9.30) mineral compound fertilizer activated with humic acids. It contains different forms of nitrogen (ammoniacal and ureic) and presents a high content of soluble phosphorus. Humic acids facilitate the absorption of nutrients and protect phosphorus from retrogradation (insolubility).

Terra 33 and **Cereaslow 33** with their high amount of sulphur (respectively 20% and 30%), together with nitrogen, increase the protein content in several crops improving the final product's quality. In Cereaslow 33 the NBPT molecule inhibits the activity of urease enzyme in the soil, reducing nitrogen losses by volatilization up to 30%.

Leaf N-Fast increases productivity and quality, stimulates photosynthetic activity, vegetative development and the rapid transformation of nitrogen into enzymes and proteins. It improves the effectiveness of the combined products (fertilizers and/or pesticides).

Grow well to eat better

FERTILIZATION PLAN

Formulation	Dosage	Mode of Application	Stage of Application
Universal Up or Terra 33	250-300 Kg/ha	Localised at seeding	Pre-sowing
	400 Kg/ha	Dispersion and integration	
CereaSlow 33	500 Kg/ha	Top dressing	Booting
Leaf N-Fast	10 L/ha	Foliar	6-8 leaves (with the weeds)
