

Potato

Uniforming size, increasing productivity and shelf-life

Base is a complex fertilizer with a high potassium and phosphorus content of high quality indicated for the fertilization of tomatoes.

Giove Bio Gold has a high concentration of plant amino acids that promotes its effectiveness at low doses. Giove Bio Gold has an anti-stress function (thermal changes and damage from phytotoxicity by weed control), also promoting a balanced nutrition.

Leaf P-Ca contains phosphorus and calcium readily assimilable at very acidic pH to strengthen the plant and plant tissues.

StimUp is a biostimulant with an elevated efficiency, containing humic and fulvic acids obtained by distillation. The use of **StimUp** stimulates the production of hormone-like substances, favouring the development of a **major number of potatoes**, uniforming their size, **leaf development and chlorophyll protection** from degenerative processes.

NaturBlack has a physioactivating action in the plant particularly marked in the fruit set phase and in phases of strong stress.

MagnetiCal is a calcium and magnesium fertiliser, rich in sugars that provides readily available energy to the plant and promotes the **shelf life** of the crop.

K-Fast contains a high content of activated potassium and has an anti-stress action, supporting the plant in the delicate stage of ripening; **K-Fast promotes the** increase of dry matter and therefore the productive yield.

For a more complete treatment, it is recommended using **Jolly** in pre-sowing, and **Super-Power Extra** localized to the seed, which thanks to the balanced supply of nitrogen and phosphorus determines a rapid and uniform emergency, and **CereaSlow33** to the which provides urea and ammonia nitrogen in synergy with sulphur, ensuring an optimal nutritional contribution to the crop.

In the absence of a microgranulator, **Universal Up**, a high-efficiency nitrogen, phosphorus and humic acid compound fertilizer, is an excellent alternative for an emergency.

**Grow well
to eat better**

Technical line:

Product	Dosage	Application	Period
JOLLY or BASE	600-800 Kg/ha	At the soil	Pre-sowing
SUPER POWER EXTRA or UNIVERSAL UP	40-50 Kg/ha 100-150 Kg/ha	Localised at the soil	At sowing
CEREASLOW 33	400-500 Kg/ha	At the soil	At ridging
GIOVE BIO GOLD	1 Kg/ha	Foliar	Vegetative development. 10-15 gg from emergence to beginning of tuberification
NATURBLACK + LEAF P-CA	1,5 l/ha + 3 l/ha	Foliar	Beginning of tuberification
NATURBLACK + LEAF P-CA	1,5 l/ha + 3 l/ha	Foliar	Tuber enlargement
MAGNETICAL	3 l/ha	Foliar	Tuber development. Interventions at 10 days
K-FAST	4 l/ha	Foliar	Ripening

For saline, sodic, and calcareous soils, it is recommended to use **Calcito** in fertigation at 10 l/ha, every 10 days. For particularly calcareous soils and particularly saline waters, increase the dose to 20 l/ha.

To strengthen and make the plant more resistant to biotic and abiotic stress, it is recommended to use foliar **Nano.T Cu** at a dose of 250-300 ml/hl every 15 gg from vegetative development onwards.

To strengthen and make the plant more resistant to biotic and abiotic stresses, **A-Myco** 1-1.25 l/ha in fertigation starting 20 gg after emergence. 3-4 interventions at 10-12 gg.
