

# Grapewine

## The right balance between production and quality

**Red Ball** is a complex mineral fertilizer that thanks to the high nitrogen content promotes a rapid vegetative recovery of the plant. **Highly soluble phosphorus and potassium from sulphate contribute to proper vine development.**

**HydroStar** is a formulation composed of pure and highly soluble raw materials, with a high percentage of organic nitrogen. **It is an effective product at low doses**, performs an action of rooting and strengthening the plant while promoting flowering, thanks to the presence of pure extracts of the alga *Ascophyllum nodosum*.

**Supremo** is rich in essential amino acids and organic iron, biologically very active. Its constant use allows to keep the plants green and active.

**NaturBlack** is a concentrate of humic and fulvic acids that promotes **vegetative awakening and balanced development. It also has an anti-stress action and promotes fruit set.**

**Febo Mix** contains magnesium, iron and high-efficiency microelements, complexed by ligninosulfonates to **promote photosynthesis and metabolism of the plant.**

**Leaf P-Ca** improves flowering and strengthens plant tissues. In the setting phase, it contributes to the enlargement of the berries.

**Giove Bio Gold**, is a biostimulant with anti-stress action highly vehicular that allows a balanced development of the plant system, favoring in particular flowering and fruit set. During the veraison stage, it helps **to increase the concentration of readily available nitrogen**, which is important for proper fermentation of the must.

**Oro-B** is a liquid fertilizer composed of boron complexed with ethanolamine. This formulation ensures rapid and uniform transport of boron within plant tissues, promoting flowering and veraison.

The nitrogen and organic acids present in **CalcioMagno** increase the development of the berries. Calcium (splitting of the berries) and magnesium (desiccation of the rachis) contribute to quality production.

**VigorGreen** is a cold-extracted *Alga Ascophyllum Nodosum* of Canadian origin. The disassociated microelements (chelated iron DTPA, complexed boron and molybdenum) **stimulate the metabolism of the plant by improving flowering, fruit set and uniformity of production.**

**Magnetical** is a calcium and magnesium-based fertilizer, rich in sugars that brings readily available energy to the plant. Magnetical increases the plant's resistance to stress and improves the quality of the grapes.

**Glycos Plus** is a product specifically designed **to enhance and standardise the colour and Brix level of the grapes.** **Glycos Plus** is formulated with amino acids and potassium to promote fruit ripening whilst maintaining shelf life.

**Vinfrutto** is an organo-mineral fertiliser with a high potassium content to replenish what has been removed in the vintage. Ideal for autumn applications due to the presence of slow-release organic nitrogen.

# Grow well to eat better

# Technical Line

Product	Dosage	Treatment	Period
<b>RED BALL</b>	200-400 kg/ha	Granular at the soil	Vegetative growth
<b>HYDROSTAR</b>	10-15 kg/ha	Fertigation (1-2 applications every 15 days)	Vegetative growth
<b>SUPREMO + NANO.T FE</b>	20 l/ha + 1-1,5 l/ha	Fertigation (1-2 applications every 15 days)	Sprouting
<b>NATURBLACK + FEBO MIX</b>	1,5 l/ha + 1-2 Kg/ha	Foliar (2-3 pplikations every 8-10 days)	From sprouts to pre-flowering
<b>LEAF P-CA + GIOVE BIO GOLD + ORO-B</b>	4 l/ha + 1,5-2 kg/ha + 1-2 l/ha	Foliar	Pre-flowering, end of flowering and fruit set
<b>CALCIOMAGNO</b>	15-20 l/ha	Fertigation (1-2 applications every 15 days)	Elongation of the cluster Wheat pepper Cluster closure
<b>VIGOR GREEN + MAGNETICAL</b>	1-1,5 l/ha + 3-4 l/ha	Foliar (2-3 pplikations every 8-10 days)	
<b>GLYCOS PLUS + MAGNETICAL</b>	2 l/ha + 3-4 l/ha	Foliar (n.3 applications)	From veraison each 20 days
<b>GIOVE BIO GOLD or LEAF N-FAST</b>	1,5 -2 l/ha or 5 l/ha	Foliar (n.2 applications)	During veraison
<b>VINFRUTTO</b>	300-400 kg/ha	Granular at the soil	Post-harvest

To strengthen and make the plant more resistant to biotic and abiotic stress we recommend the use of **Nano. T Cu** foliar at a dose of **200-250 ml/ha** every 15 days from vegetative development onwards. In case of vineyards with poor vigor and productivity we recommend 2-3 applications of **Leaf N-Fast** at **10 l/ha** every 15 days from the sprout development phase.
