

# Fertigation 20.20.20

Fertigation 20.20.20 is a water-soluble NPK crystalline fertilizer that can be applied in fertigation.

The balanced nitrogen, phosphorus, and potassium ratio makes it available for all stages of the crop cycle by providing a balanced nutrition. Nitrogen is present in three forms (nitric, ammoniacal, ureic) that ensure a constant release throughout the whole crop cycle. The high phosphorus content improves the root system.

It contains microelements chelated with EDTA, that guarantee an easier assimilation preventing possible deficiencies and favouring biochemical processes.

It is particularly indicated for horticultural crops and fruit trees.
