

Mastercote (control release Nitrogen)

18.9.18+25SO₃

Mastercote is an NPK mineral compound fertilizer obtained by granulation with high-solubility and availability mineral matrices. It contains 12% of coated urea which allows a controlled release of nitrogen over time and guarantees an improved nutrient intake in the proper phenological

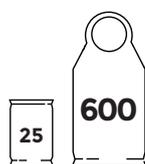

stages; in this way the development of the root and the foliar systems is promoted. The high content of water-soluble sulphur helps nitrogen absorption. It is indicated for horticultural crops, fruit trees and turf.
