

# StarSlow

## 30.15+2MgO with NBPT

StarSlow is an NP granular fertilizer obtained by blending ureic nitrogen stabilized with NBPT. This is a molecule that inhibits the activity of urease enzyme in the soil, reducing losses by volatilization up to 30%. NBPT is applied to the granules through a coating process which allows to cover

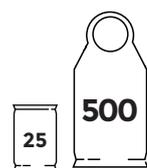

them uniformly, increasing their effectiveness. StarSlow has a high phosphorus content which is water-soluble and easy to be absorbed by the plant. It is ideal for pre-sowing or localized applications.
