

VerV N9

Promoter of radical activity

VERV N9 is an organic nitrogen fertilizer with a very high content of amino acids, oligopeptides and peptides, greater than 50%, obtained from enzymatic hydrolysis (low salinity). VERV N9 has a phytostimulant action and a very high Nutritional efficiency, promoting the development and activity of both roots and the foliar apparatus. VERV N9 improves soil fertility with conditions and stimulates the growth of microorganisms and their activity.

DOSAGES AND USES

CROPS	DOSAGES	PERIOD	MODE
Fruit trees	10-20 l/ha	vegetative growth, in pre-flowering, post fruit set, fruit development	fertigation
Open field horticultural	10-30 l/ha	Post-transplant post fruit set, fruit development	fertigation
Horticultural in greenhouse	2-4 l/1000m ²	3-4 applications after transplant every 10-15 days	fertigation
Cereals	3-4,5 l/ha	Tillering, flag leaf	foliar
All crops	2,5-5 l/ha	vegetative development	foliar

Benefits

- Stimulating effect thanks to the high content of amino acids, oligopeptides and peptides > 50%;
- Promotes the development of the plant in particular of the roots;
- It increases the efficiency of the fertilizers used in combination;
- More constant release and limited risk of leaching;
- It increases the biological fertility of the soil thanks to the quality of the organic matrix (low salinity) and the C/N ratio equal to 8;
- Versatility since it can be used both in fertigation and foliar application in association with other products for Nutrition and defence.

COMPOSITION

Nitrogen (N) organic	9%
Carbon (C) organic	24,5%

ALSO CONTAINS:

total amino acids	50%
of which Glycine	13%
of which Proline	7,5%
of which Hydroxyproline	6%
of which Glutamic Acid	5%
of which Arginine	5%

pH	5,5
