# CereaSlow 33

33.0.0+30SO<sub>3</sub> with NBPT

CereaSlow 33 is a nitrogen-based fertilizer obtained by blending with ureic nitrogen stabilised with NBPT. This is a molecule that inhibits the activity of urease enzyme in the soil, reducing losses by volatilization up to 30%. NBPT is applied to the granules through a coating process which allows to cover them uniformly, increasing their effectiveness. The high sulphur content, in synergy with nitrogen, favours the protein synthesis processes in the plant.

It is ideal for the fertilization of cereal crops.

## Title and composition

Nitrogen (N)	Sulphur (SO <sub>3</sub> )
33% <sup>(1)</sup>	30 <sup>(4)</sup>
23% <sup>(2)</sup>	
10% <sup>(3)</sup>	
inhibitor of urease: NBPT	

(1) total - (2) ureic - (3) ammoniacal - (4) water soluble
