# Cereaphos

0.40.0+12CaO+5SO<sub>3</sub>+0,01B+0,01Zn

Cereaphos is a mineral fertilizer obtained by granulation with a high solubility and availability phosphatic matrix. The presence of sulphur increases the organoleptic aspects of crops, while boron favours pollination by ensuring a more stable production. Zinc is important as it is a forerunner of many physiological reactions of plants and it is also a cofactor in phosphorus absorption.

Cereaphos contains humic acids.

It is indicated for localized fertilization at sowing or transplant.

## Title and composition
