

## POWER - STARTER EFFECT

# SuperPower Plus

SuperPower Plus is a mineral micro-granular NP compound fertilizer with boron and zinc (granulometry 0,7 - 1,7 mm). The new formulation with boron and zinc promotes the plant growth, stimulates the root development, and provides several advantages:

- increases the nutrient use efficiency
- promotes root development and root density
- anticipates flowering and maturation
- is environmental friendly

It can be applied both in furrow, in contact with the seed, and during transplant (starter technique). This allows to reduce the dosages thanks to an improved fertilizer use efficiency. It is recommended for field crops and horticultural.
