

Verv Plus

Biopromoter of vegetative development

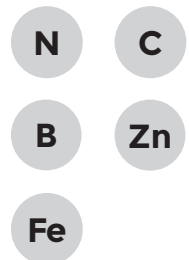

Verv Plus is a bio-promoter of vegetative development containing over 45% of total amino acids in mainly levorotatory form. Verv Plus activates the plant's metabolism thanks to the presence of organic nitrogen of amino acid origin and a balanced mix of microelements. Verv Plus improves productivity by stimulating vegetative development, flowering and fruit set.

Benefits

- Improves productivity by stimulating vegetative development, flowering and fruit set;
- It has a biostimulating action thanks to the presence of free amino acids and oligopeptides;
- It activates the metabolism of the plant thanks to the mix of microelements, preventing the onset of deficiencies;
- It increases the effectiveness of the products distributed together, thanks to the co-formulating action of the amino acid matrix.

FORMULAZIONE

Title and composition

Nitrogen (N)	Carbon (C)	Boron (B)	Iron (Fe)	Zinc (Zn)	pH
7% (1) 7% (2)	22% (2)	0.5% (3)	1% (1)	0.5% (1)	7,5

(1) total - (2) organic - (3) water soluble

Dosages and uses

Crop	Foliar dosages	Period and method of use
Fruit trees (kiwi, apple, pear, cherry, peach, citrus)	1,5-2,5 l/ha	2-3 applications from vegetative growth each 10-20 days
Grapevine	1,5-2,5 l/ha	2-3 applications from vegetative growth each 10-20 days
Horticultural	1-2 l/ha	3-4 applications each 10-15 days after the transplant
