

Stone fruits

Products easy to absorb obtained by high-quality matrices and the attention to nutrient demands in every phenological phase ensure high-quality fruits

Be-Start 5.15 and **NaturBlack** favour a rapid vegetative growth thanks to the **starter effect** of the totally assimilable phosphorus and to humic and fulvic acids that contribute to improve **crop resistance to stress**.

B-Power and **Giove Bio Gold** stimulate **flowering and fruit set**, increase metabolism and favour plant recovery from stress.

Leaf P-Ca, as a result of the high concentration of phosphorus and calcium that are completely soluble, determines a better **fruit swelling**.

K-Fast stimulates **ripening contributing to increase colour and sugar content** thanks to the high concentration of potassium, to the presence of sulphur and to the acidic pH. The use of **Verv N9**, which contributes to the overall development of the plant, **increases the positive effects of the products combined with them**.

Febo products, **increase the effectiveness of other products used in combination** (both fertilizers and/or pesticides), thanks to lignosulphonates, they have a wetting, adhesive and carrier effect.

MagnetiCal is made of Calcium and Magnesium. It is rich in sugar which makes **easy accessible energy** for the plant and it **improves the organoleptic qualities of the fruit**.

The use of **Leaf P-Ca** and **CalcioMagno** in the last stages of growth help **to improve the shelf life and to obtain a more homogeneous fruit colouring**.

GROW WELL TO EAT BETTER

Application

Universal Up or **Terra 33 200-300 kg/ha** - granular
Be-Start 5.15 15 20 l/ha + Naturblack 5 l/ha – fertigation
from vegetative growth

B-Power 3-4 l/ha + Febo Bio 1 kg/ha + Giove Bio Gold 1-2 kg/ha - foliar
n.2 treatments: pre and post flowering

Leaf P-Ca 20 l/ha + Verv N9 15-20 l/ha – fertigation
(at least 2 applications 10-12 days one from the other)
Leaf P-Ca 4-5 l/ha + Giove Bio Gold 1-2 kg/ha + Febo Mix 1-2 kg/ha – foliar
(at least 2-3 applications every 5-7 days one from the other)
from swelling to stone hardening

CalcioMagno 20 litri/ha + K Fast 10l/ha + Verv N9 10 litri/ha - fertigation
(applications every 8-10 giorni, the number of interventions
depends on the earliness of the cultivar)
MagnetiCal 3-4 l/ha + Giove Bio Gold 1-2 kg/ha – foliar
(at least 3-4 application every 5-7 days)
from fruit swelling up to 10 days from harvest

Vinfrutto or **Granoro** or **Flex 300-400 kg/ha** – granular
Febo Mix 2 kg/ha + Leaf P-Ca 3 litri/ha – foliar (1-2 treatments)
post harvest
