

# Sunflower

## Complete and balanced nutrition to increase productivity and oil yield

**B-Power** is a product based on **boron ethanolamine** whose effectiveness is strengthened by the presence of **humic and fulvic acids**.

Boron **increases fertility** (flower abortions are reduced), humic and fulvic acids carry boron within the plant and help it to better react to **water and thermal stress**, which highly reduce sunflower productivity.

The use of **Leaf N-Fast** increases significantly the efficiency of use of nitrogen in the crop.

Tests on cereals have shown that **1 kg of Leaf N-Fast has the same effectiveness as 3 kg of urea** or of 1,5 kg of ammonium nitrate. Moreover, the combined use with pesticides, thanks to the coformulant action, increases the effectiveness and optimizes production costs.

**Grow well  
to eat better**

# Application

 Granular applications  
 Foliar applications

<b>Cerea Blu</b> 300 kg/ha pre-sowing																			
<b>Super Power</b> 40 kg/ha localized at sowing																			
<b>Cerea Slow 33</b> 150 kg/ha ridging																			
<b>B-Power</b> 5 l/ha with weeding (5-6 leaf)																			
<b>Leaf N-Fast</b> 10 l/ha with agrochemicals
