Apple Tree

To obtain crunchy and tasty apples with long conservability

NANO.T FE is characterized by the presence of micro-particle, that guarantee a constant intake of iron. It stimulates photosynthesis and **contributes to prevent iron chlorosis.**

VERV N9 is an animal idrolized enzymatic that with an action similar to biostimulants, stimulates rooting and **increase the effects of the products used with it.**

FEBO MIX is a concentrate of complexed micro and meso elements with lignosulfades which **favours the vegetative restart.**

GIOVE BIO GOLD is vegetal enzymatic idrolised with an **anti-stress action.**

CALCIOMAGNO contains complexed with organic acids with acid pH calcium and magnesium which allows for their total and constant absorption. **CALCIOMAGNO prevents the bitter pit thanks to its calcium and stimulates photosynthesis thanks to its magnesium.**

K-FAST is made with complexed with humic and fulvic acids. **Favours the increase of dry substance and crunchier, heavier, tastier and conservable fruits.**

B-POWER contains complexed with humic and and fulvic acids boron to **improve blooming and fruit set in order to obtain more stress-resistant fruits.**

LEAF P-CA has an acid pH made with phosphorus and calcium that **favours fruit growth and its colour.**
LEAF P-CA also helps to contrast bitter pit.

GLYCOS PLUS is made with amino acids and potassium and **favours a more defined color without ruining its conservability.**

Grow well to eat better

Linea tecnica

VINFRUTTO 300-400 kg/ha or LAND PLUS 300 kg/ha	n.1 intervention																			
NANO.T FE 6 l/ha + VERV N 9 10-15 l/ha			n.1 int.																	
GIOVE BIO GOLD 1-2 kg/ha + FEBO MIX 2-3 kg/ha			n. 2-4 interventions																	
NANO.T FE 6 l/ha + VERV N 9 10-15 l/ha + LEAFP-Ca 10-15 l/ha					n.1 intervention															
B-POWER 2-3 l/ha						n.1 intervention														
VERV N 9 10 l/ha + CALCIOMAGNO 20 l/ha										n. 4-5 interventions										
LEAF P-Ca 4-5 l/ha + GIOVE BIO GOLD 1-2 kg/ha											n. 3-4 interventions									
K-FAST 10-20 l/ha														n. 3 interventions						
GLYCOS PLUS 2l /ha															n. 3 interventions					

 foliar application

 Fertigation

 Granular application

In case of SALINE, CALCAREOUS OR SODA SOILS we suggest the use of CALCITO in fertigation with the dose of 10 litres / 1000 m² from veraison every 15-20 days.
