

FERT - THE BENEFIT OF THE TWO WORLDS

Ortofrutto Special

Ortofrutto Special is an organo-mineral NPK compound fertilizer obtained by granulation. It contains both organic and mineral matrices with a high nutritional value. 1% of slow-release organic nitrogen guarantees a constant absorption over time, and phosphorus is soluble, therefore it is assimilated by the plant more easily. Boron favours the pollination and fertility of flowers, while the presence of humic acids allows a more rapid and efficient translocation of nutrients in the plant and provide organic matter to the soil.

It is recommended to improve the quality and productivity of fruit trees and horticultural crops.
